NEW ABSTRACT

A device with a display is operable in at least two modes. In the first mode, display data is provided to the screen for viewing in a first orientation and in the second mode, display data is provided to the screen for viewing in a second, orthogonal, orientation. In the first mode, the display data fills the screen, and in the second mode the display data includes two images for filling the screen. The aspect ratio for at least one of the two images in the second mode may then be the same as for the image in the first mode.
